SUMMARY

Computer Science senior with hands-on Linux administration, automation, and cloud experience supporting 100+ users. AWS Cloud Practitioner certified with experience in shell scripting, CI/CD workflows, and cloud-native development. Seeking Cloud and DevOps internships focused on scalable infrastructure, reliability, and automation.

EDUCATION

Bachelor of Science in Computer Science

Dec 2026

Portland State University, Portland, OR

GPA: 3.6

COURSEWORK

Core: Data Structures, Algorithms, Discrete Mathematics, Operating Systems

Systems: Systems Programming, Computer Architecture, Database Systems

Languages: Principles of Programming Languages

TECHNICAL SKILLS

Programming: Python, C, C++, SQL

Operating Systems: Linux, Windows

Databases: MySQL, PostgreSQL

Tools: VS Code, Visual Studio, Jupyter, Wireshark

Cloud: AWS (EC2, S3, IAM, VPC, Lambda, API Gateway, CloudFront, CloudWatch)

DevOps & Automation: Git, Shell Scripting, Docker, Terraform, Kubernetes, Ansible, Jenkins, GitHub Actions

Concepts: CI/CD, Infrastructure as Code (IaC), Networking, REST APIs, Microservices

EXPERIENCE

Quantum Computing Researcher (URMP) • Portland State University

Jun 2026 – Present – Portland, OR

- Implemented Grover's Search and Quantum Phase Estimation in Python using Qiskit for quantum algorithm validation.
- Optimized quantum circuits using the Qiskit transpiler, reducing gate count and circuit depth for efficient execution.
- Evaluated AI-assisted circuit optimization to improve quantum scalability and compiler performance.

Alternative Formats Technician • Portland State University

Nov 2024 – Present – Portland, OR

- Produced 40+ accessible documents weekly using OCR and document remediation for students with disabilities.
- Automated repetitive formatting workflows, reducing manual processing time by approximately 25%.
- Managed Linux and Windows file systems that support the secure organization of 500+ academic digital assets.

Linux Support Specialist (CAT) • Portland State University

Sep 2025 – June 2026 – Portland, OR

- Provided Linux technical support for 20+ users, resolving account, virtual lab, and network connectivity issues.
- Managed Linux user provisioning and access controls across shared PSU servers supporting 100+ users.
- Developed Bash scripts automating system validation and debugging, reducing troubleshooting time by 30%.

PROJECTS

Scalable Serverless Web Application – AWS Cloud Architecture

- Architected and deployed a serverless web application using Amazon S3, CloudFront, API Gateway, and AWS Lambda for secure, scalable content delivery.
- Implemented HTTPS with AWS Certificate Manager and IAM least-privilege policies to strengthen application security.
- Integrated CloudWatch monitoring and centralized logging to improve application reliability and operational visibility.

Arvik Archive Manager – UNIX File System Utility

- Developed a UNIX archive utility using low-level system calls supporting archive creation, extraction, and metadata restoration.
- Engineered MD4 checksum validation and metadata recovery to ensure archive integrity and reliable file restoration.
- Validated byte-level interoperability and eliminated memory leaks through Valgrind verification.

C++ Template-Based Data Management Engine

- Designed a template-based object-oriented framework using inheritance, polymorphism, and operator overloading.
- Implemented a recursive templated doubly linked list using raw pointers and dynamic memory allocation.
- Developed exception handling and memory management to improve software reliability and reusable class design.

CERTIFICATIONS

AWS Certified Cloud Practitioner • AWS • Sep 2025

International Student Mentor • PSU • Dec 2025
